DOMARY EXAMINED	

Continuation of 11. does NOT place the application in condition for allowance because: Regarding applicants noting of the typographical error in the 35 U.S.C. 112 first paragraph rejection, it is noted that applicants interpretation of the rejection as pertaining to claims 1, 2 and 4-25 is indeed correct, and the examiner thanks applicant for clarification of this issue.

Regarding applicants arguments concerning the substantive details of the rejection, applicant argues that driving a conductor is distinct from inductively or capacitively inducing a current. The examiner is interpreting "driving" a conductor to include processes that result in current or voltage signal propagation along the conductor, including driving through a capacitive or inductive coupling. Additionally, it is noted that inductive and capacitive coupling of circuit stages is commonly practiced in the art, and those of skill in the art would immediately recognize these practices. Thus, the examiner must maintain the rejection because it is not enabled to one of ordinary skill to drive a first conductor of a pair of parallel conductors without also driving the second of the conductors through inductive and capacitive coupling.
